

**VIMAR**  
EQUIPMENT

---

## WHIRLWIND WINTERIZATION PROCEDURE

---

**In freezing weather, if the equipment is to be left exposed to sub-freezing temperatures, the following procedure should be followed:**

1. Remove drain plug located mid-ship on the right side of the unit
2. Remove water filter and housing and store in cab
3. Turn on water system to purge water out of lines
  - \* This should only take 15-20 seconds**
4. Open drain cocks at water manifolds (located mid-ship on left & right side of sweeper)
5. Open drain cock at high pressure pump if equipped
6. If equipped, use air purge system to remove any remaining water

**\* Located by the water filter housing is an air valve, use shop air to purge out water.**

**WARNING: FAILURE TO PROPERLY WINTERIZE CAN LEAD TO COSTLY DAMAGE TO WATER COMPONENTS.**

***If you have any concerns do not hesitate to call 604-430-4274***
